About the IEC

4

The International Electrotechnical Commission was founded in 1906 with the object of standardizing nomenclature and ratings of electrical apparatus.

Lord Kelvin was the first President of the IEC.

The field of standardization of the IEC now embraces all important electrical and electronic products from turbogenerators to transistors, from reactor instrumentation systems to connectors and printed wiring.

The radiocommunication field has been actively studied since 1926.

The work of the IEC is carried out by experts in National Committees all over the world. 1400 delegates from 41 countries will be present at the Washington General Meeting and will have the opportunity to see the Amateur Service at work.
